

ANURAG SRIVASTAVA

Backend & Full-Stack Engineer | Python · Django · FastAPI · React | Scalable APIs & Distributed Systems
Delhi, India | anuragkipm751@gmail.com | +91-7355661839 | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)

PROFESSIONAL SUMMARY

Result-driven Backend & Full-Stack Engineer with 4+ years of experience building high-performance, scalable systems. Led a 6-member engineering team in developing Mobiheal, an enterprise MDM platform managing 5 lakh+ (500,000+) enrolled Android and iOS devices — optimizing API response times to under 100ms. Expertise spans Django, FastAPI, REST APIs, Celery, Redis, Docker, React, and Node.js, with hands-on experience in Google & Apple API integrations, CRM modernization, and ML-backed automation. Open to backend, full-stack, and AI-integrated roles in hybrid work environments.

KEY ACHIEVEMENTS

- Scaled Mobiheal MDM platform to manage **5 lakh+ (500,000+) enrolled Android & iOS devices** with real-time remote control and policy enforcement.
- Optimized backend API response times to **under 100ms** through Redis caching, database query tuning, and Celery async task offloading.
- Led a **6-member cross-functional engineering team** in end-to-end product development, architecture decisions, code reviews, and production deployments.
- Architected and delivered **30+ production-grade REST APIs** across two companies, powering mobile apps and B2B marketplace platforms at scale.
- Migrated **5+ legacy Perl modules** to Django/FastAPI at TradeIndia, eliminating technical debt and significantly improving code maintainability.
- Automated multi-channel lead notification pipelines (Email, SMS, WhatsApp) reducing manual sales ops effort and accelerating lead response workflows.

WORK EXPERIENCE

Software Engineer · Mobisec Technologies, New Delhi

July 2023 – Present

MDM Product · Django · FastAPI · Celery · Redis · Docker · React · Google & Apple APIs · Team Lead (6 members)

- Led end-to-end development of Mobiheal, an enterprise MDM product scaling to **5 lakh+ enrolled devices** across Android and iOS.
- Drove API optimization initiatives achieving **sub-100ms response times** via Redis caching, async Celery task queues, and database query tuning.
- Implemented core MDM modules: Geo-fence, Time-fence, Remote Control, device enrollment, and app policy enforcement.
- Built scalable REST APIs using Django REST Framework for real-time device communication, reporting dashboards, and admin operations.
- Integrated Google Android Management API and Apple MDM Protocol for cross-platform device management and remote push commands.
- Containerized the full application stack with Docker and Nginx, enabling consistent and reliable dev/staging/production deployments.
- Mentored junior developers within a 6-member team; led sprint planning, architecture reviews, and enforced code quality standards.

Software Engineer · Trade India Infocom Network, Noida

Dec 2021 – July 2023

Django · FastAPI · REST APIs · CRM · IVR · MySQL · Celery · B2B Marketplace Platform

- Designed and delivered backend APIs for the TradeIndia mobile application and B2B marketplace, one of India's largest platforms in its category.
- Migrated 5+ business-critical Perl modules to Django and FastAPI, modernizing the codebase and reducing long-term maintenance costs.

- Automated lead assignment and multi-channel notification workflows (Email, SMS, WhatsApp) using Celery workers and third-party APIs.
- Built and maintained IVR systems integrated with the CRM platform, enabling automated inbound call flows for sales teams.
- Improved data validation logic and flow across CRM and Catalog modules as part of a wider platform modernization initiative.

TECHNICAL SKILLS

Languages	Python, JavaScript, SQL, Perl (legacy)
Backend	Django, FastAPI, Django REST Framework, Flask, Node.js, Celery, Redis, GraphQL
Frontend	HTML5, CSS3, Bootstrap, Tailwind CSS, React, Redux, SASS
Databases	MySQL, PostgreSQL, MongoDB, Redis
DevOps	Docker, Nginx, Git, Linux, Jenkins, CI/CD Pipelines, BitBucket
Cloud	GCP (Cloud Run, Storage), AWS (EC2, S3)
APIs	Google Android Management API, Apple MDM Protocol, WhatsApp, SMS, Email APIs, Firebase
Other	System Design, Async Processing, Microservices, ML Integration, Code Reviews, Mentoring

PROJECTS

Mobiheal – Enterprise MDM Platform | *Django · Celery · Redis · Docker · Nginx · GCP · Google & Apple APIs*

- Led full product development of an MDM platform managing **5 lakh+ Android & iOS devices** with real-time policy enforcement, Geo-fence, Time-fence, and Remote Control features.
- Achieved **sub-100ms API response times** through Redis caching, Celery async task queues, and DB query optimization — deployed and served via Docker + Nginx.

School Management System | *Django · MySQL · REST API · Bootstrap*

- Full-featured school platform for Shri Vidyapeeth International School with role-based login for students, teachers, and admins, plus attendance, timetable, and automated report generation.

E-Commerce Platform | *Django · MySQL · REST API · Payment Gateway*

- Built a full-featured shopping platform with user auth, product catalog, cart, order management, and secure payment gateway — with a React.js frontend consuming Django REST APIs.

SMS Spam Detector | *Python · Machine Learning · Jupyter Notebook*

- Built an ML model to classify SMS messages as spam or ham using NLP preprocessing and classification algorithms, achieving high accuracy on test datasets.

EDUCATION

B.Tech – Computer Science & Engineering

Aug 2016 – June 2020

KIPM College of Engineering and Technology, Gorakhpur, India

ADDITIONAL INFORMATION

- Actively exploring AI/ML-integrated backend development — LLM API integrations, agentic workflows, and ML model deployment.
- Strong analytical and problem-solving skills; experienced in mentoring developers and leading cross-functional engineering teams.
