PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 9+ years of experience designing and delivering enterprise applications using .NET, Microservices, React, and cloud-native technologies. Experienced in building scalable frontend applications with React, Redux, TypeScript, and responsive UI frameworks along with secure backend APIs on Azure. Skilled in enterprise architecture, CI/CD, performance optimization, Microsoft technologies, and exploring AI-driven solutions including Microsoft Copilot, automation workflows, and intelligent assistants. Experienced in Azure cloud-native application deployments with exposure to Azure infrastructure, IaaS/PaaS services, secure cloud architecture, DevOps workflows, and scalable distributed systems.

TECHNICAL SKILLS

Programming Languages : C#, TypeScript, jQuery, SQL

Backend : ASP.NET Core, ASP.NET MVC, RESTful APIs, Microservices, Entity Framework Core, Event-Driven Architecture

Frontend : React.js, Redux, React Hooks, Context API, HTML5, CSS3, Bootstrap, Material UI, Responsive UI Development

Cloud & Infrastructure : Azure, Azure DevOps, Azure App Services, Azure Key Vault, Azure IaaS, Azure PaaS, Terraform, Docker, CI/CD, Azure Boards, GitHub, GitLab, Git, Cloud Infrastructure, Scalable Cloud-Native Architecture

Security : JWT, RBAC, OAuth 2.0, AWS Secrets Manager, GCP Secrets, Azure Key Vault

AI & Automation : Microsoft Copilot, Github Copilot, AI-assisted development tools, Prompt Engineering, Intelligent Workflow Automation, Agentic AI

Messaging & Background Processing : RabbitMQ, Asynchronous Messaging, Hangfire

Architecture & Design : Microservices Architecture, CQRS Concepts, Event-Driven Architecture, Design Patterns, SOLID Principles, Distributed Systems

Testing & QA : Unit Testing, API Testing, Postman

Methodologies : Agile, Scrum

Database : SQL Server

PROFESSIONAL EXPERIENCE (9+ YEARS)

Senior Software Engineer | Jul 2025 - Mar 2026

Closetloop Technologies | Mohali

- Owned backend design for **subscription lifecycle and billing APIs** on .NET 8, delivering robust, versioned REST endpoints for enterprise workflows.
- Devised **invoicing and payment flows** to handle high-volume transactions with secure processing, reducing manual operational effort by 50%.
- Developed responsive frontend modules using React, Redux, and TypeScript, improving user experience and reducing page load times across billing workflows.
- Spearheaded migration from monolith to **microservices**, improving scalability by 35% and decoupling interdependent modules.
- Implemented asynchronous communication patterns using RabbitMQ for reliable event-driven processing across distributed services.
- Implemented **secrets management** via AWS Secrets Manager, mitigating credential exposure and strengthening security controls.
- Optimized database queries and **API performance**, improving response times by 25% for critical endpoints.
- Developed and managed scheduled background jobs using Hangfire for billing workflows, retries, and reconciliation processes.
- Strengthened service **observability** with logging and monitoring, reducing incident triage time by **50%**.
- Led backend optimizations that generated a **12% increase** in new customer acquisitions within three months expanding market reach and partner onboarding.

Technologies Used: Azure, Microservices, C# (.NET 8), jQuery, SQL Server, TypeScript, React, Redux, Copilot

Senior Software Engineer (Microservices & Cloud Solutions) | Jan 2022 - Jul 2025

Wipro Technologies | Noida

- Led backend architecture for a **multi-tenant SaaS platform** integrating external commerce channels, simplifying complex domain workflows.
- Engineered **distributed microservices** for inventory, order orchestration, and shipping automation, increasing system scalability by 40%.
- Implemented **OAuth 2.0** and **JWT-based** authentication mechanisms to secure microservices and external API integrations.
- Integrated secure authorization workflows using **OAuth 2.0 bearer tokens** and role-based access control for enterprise SaaS applications.
- Designed and implemented secure API access management using token-based authentication across distributed microservices.
- Built reusable UI components and state management flows using React, Redux, and Material UI for enterprise SaaS dashboards.
- Enabled **payments and communications integration**, boosting payment success rate by 20% and improving customer engagement.
- Built and automated **CI/CD pipelines** on Azure DevOps, cutting deployment time by 60% and improving release consistency.
- Worked on Azure cloud-native deployments leveraging Azure PaaS services and scalable infrastructure principles for enterprise applications.
- Collaborated with DevOps and infrastructure teams on CI/CD automation, secure deployments, and cloud environment configuration using Azure DevOps and Git workflows.
- Mentored engineers and authored **architectural documentation**, fostering Agile practices and collaborative delivery.
- Collaborated using Azure Boards, Git workflows, and Pull Requests to streamline Agile delivery and code review processes.
- Developed unit tests and performed API validation using Postman to improve service reliability and release quality.

Technologies Used: Azure, Microservices, C#, JWT, OAuth 2.0, RESTful Web API, TypeScript, React, Redux, Git, DevOps, Copilot, SQL Server

Senior Software Engineer (Backend Systems & Integrations) | Jul 2019 - Jan 2022

Chetu Incorporation | Noida

- Delivered **backend services** in .NET Core enabling real-time workflow automation and interactive dashboards.
- Adopted **microservices architecture** to improve modularity, maintainability, and scaling across core modules.
- Designed and implemented third-party REST API integrations across multiple marketplaces and shipping providers using scalable microservices architecture.
- Orchestrated **shipping carrier integrations**, reducing tracking errors by 45% and streamlining notifications.
- Optimized **API response times** and data access patterns, lowering latency by 30%.
- Partnered with product and QA to align **integration roadmaps**, decreasing release risk by 30%.
- Implemented **OpenID Connect** (OIDC) based authentication flows for secure user identity verification and seamless integration with third-party applications.
- Implemented auto scaling and stateless designs to support 10x peak load, achieving **99.95%** uptime while maintaining predictable latency for critical workflows.

Technologies Used: ASP.NET Core, Microservices, C#, SQL Server, OpenID Connect, RESTful Web API

Software Engineer (Full Stack .NET Developer) | Jun 2016 - Jul 2019

Keskintech Services | Delhi

- Created enterprise applications using **ASP.NET MVC** and SQL Server for diverse client requirements.
- Implemented **JWT** and **OAuth 2.0** based authentication and role-based access control (RBAC) to secure enterprise web applications and **REST APIs**.
- Developed token-based authentication and authorization workflows using **ASP.NET MVC**, including secure API access and claims-based authorization.
- Integrated **payment gateways** for transaction-heavy systems, ensuring reliability and auditability.
- Optimized **database performance** through indexing and query tuning to enhance throughput.
- Collaborated with stakeholders to **refine requirements** and deliver stable, maintainable releases.

Technologies Used: ASP.NET MVC, SQL Server, C#, HTML, CSS, OAuth, JWT

PROJECTS

Marketplace Integration Platform | Wipro Technologies

Cloud-native, multi-tenant platform unifying catalog, orders, and shipping across marketplaces using distributed microservices and secure APIs.

- Designed **multi-tenant architecture**, scaling horizontally and improving capacity by 70%.
- Built **inventory and order orchestration** services, increasing order throughput by 50%.
- Implemented **JWT + RBAC and OAuth 2.0**, decreasing unauthorized access incidents by 80%.
- Developed resilient **marketplace connectors** with retry/backoff, lifting sync success rate to 98.5%.
- Established **CI/CD pipelines** with automated tests, reducing release lead time by 48 hours.
- Implemented scalable distributed microservices architecture supporting high-volume marketplace integrations and cloud-native deployments.
- Introduced **observability** (logging/metrics/alerts), cutting mean time to resolve by 60%.
- Optimized **API performance** via caching/pagination, lowering P95 latency by 180 ms.
- Implemented asynchronous event-driven communication using RabbitMQ to improve scalability and service decoupling.
- Utilized Postman for API validation and integration testing across distributed services.

Subscription Billing and Invoicing Engine | Closeloop Technologies

High-throughput billing system for subscriptions, invoicing, payments, and reconciliation with secure processing and auditability.

- Architect **rate plans and proration** logic, reducing billing discrepancies by 45%.
- Implemented **payment workflows** with idempotency/retries, cutting failures by 40%.
- Automated **reconciliation** and ledger posting, saving 20 hours per week in operations.
- Migrated from **monolith to microservices**, decreasing rollback incidents by 45%.
- Deployed **secrets management** and encryption at rest, improving compliance readiness by 30%.
- Fine-tuned **SQL queries and indexing**, reducing API response times by 30%.
- Implemented Hangfire background jobs for invoice scheduling, retry mechanisms, and automated reconciliation workflows.

AI Productivity Assistant (POC)

Prototype application exploring Microsoft Copilot integrations, prompt-based workflows, and AI-assisted automation for enterprise productivity.

- Built proof-of-concept workflows using **prompt engineering** and AI-assisted task automation.
- Explored **Agentic AI** patterns for multi-step workflow execution.
- **Integrated secure APIs** and role-based access for enterprise usage scenarios.

EDUCATION

Graduate in Computer Science | *June 2016*

Krishna Institute of Technology | *Kanpur*

Certification: PGP(.Net) by NIIT

Language: English
