Summary

B.Tech IT graduate with full-stack development experience using HTML, CSS, JavaScript, TypeScript, Node.js, and MongoDB. Worked on web apps, responsive design, and database management during internships. Proficient in Angular, React, and Next.js with key projects including a blood bank system and a pathfinding visualizer.

Education

HNB Garhwal University

Bachelor of Technology in Information Technology

Sep. 2020 – June 2024

Srinagar, Uttarakhand

Technical Skills

Languages: HTML/CSS, JavaScript, TypeScript

Database/Tools: VS Code, MongoDB

Technologies/Frameworks: GitHub, Angular, React, Next.js, Node.js

Experience

Bhart Intern

Aug. 2024 – Sep. 2024

full-stack web development Intern

- During my internship, I worked on multiple full-stack web development projects utilizing HTML, CSS, Node.js, and MongoDB.
- I developed a user registration form to capture and store user data, built a blog website enabling users to read and post content, and created a money tracker web app for managing personal finances.
- Each project involved both front-end and back-end development, including data storage and retrieval using MongoDB.
- This experience enhanced my skills in full-stack development, database management, and user interface design.

Cognifyz

Sep. 2023 – Oct. 2023

Web Development Intern

- During my internship at Cognifyz, I worked on various web development tasks, including creating interactive web pages using HTML, CSS, and JavaScript.
- I also developed responsive designs with front-end frameworks like Bootstrap and implemented image manipulation techniques.
- Additionally, I designed a landing page for a web developer internship program, enhancing my skills in full-stack development and responsive design.

Projects

Temperature Data App | *Angular, TypeScript*

Sep. 2024

- Developed a web application to manage temperature data using Angular. Implemented data entry and display functionalities with a tab-based interface using Angular Material.
- Built reusable components for adding and viewing data, ensuring efficient data handling and a responsive user experience.

Life Drop (Blood Bank Management) | *PHP, MySQL, Xampp*

June 2024

- Developed a web-based system for managing blood donations and requests. The platform supports two types of users: Donors/Receivers and Hospitals/Clinics.
- Hospitals can manage blood samples, request blood, and track statuses, while Donors/Receivers can request or donate blood.
- Streamlined communication and blood management for efficient handling of blood bank operations.

Path-finding Visualizer | *React, Dijkstra's algorithm*

Dec. 2023

- Developed an interactive application to visualize Dijkstra's algorithm and other path-finding techniques in real-time.
- Enabled users to create grids, set start/end points, and place obstacles to simulate path-finding scenarios.
- Showcased the shortest path-finding process with real-time visual feedback.

Certifications

- Python For Machine Learning
- Python for beginners
